

Jia Yi Ooi

Senior Full-Stack Engineer

Penang, Malaysia (UTC+8) · Open to remote and relocation · me@jyooi.com

[LinkedIn](#) · [GitHub](#) · [jyooi.com](#)

SUMMARY

Senior full-stack engineer with 8+ years' experience, the last 5+ fully remote for teams in Singapore, the US, and Australia. Most recently built real-time messaging for uchat Business, a B2C customer-conversation inbox processing 100k+ messages a day, on React/TypeScript and FastAPI on Kubernetes. Contributor to the open-source Hummingbot ecosystem. Deepening platform/SRE skills - Kubernetes CKA in progress.

LANGUAGES & TECHNOLOGIES

Languages: TypeScript, Python, Elixir, SQL
Frontend: React, Next.js, Vite, TanStack Router, React Query, Socket.IO, Electron
Backend & Infra: FastAPI, Kubernetes, CI/CD, REST API design, load testing
Other: Web3 wallets (MetaMask, Tezos), real-time systems

EXPERIENCE

Career development sabbatical

Apr 2026 – Present

- Preparing for the Certified Kubernetes Administrator (CKA) exam; deepening SRE and platform tooling.
- Building **elixir-opentui**, a hobby project porting a TypeScript terminal UI library to Elixir - reimplementing its rendering loop on BEAM processes.

uchat

Nov 2024 – Apr 2026

Senior Software Engineer, Business unit

Remote (Singapore)

Business inbox of uchat, a consumer messaging app in Thailand; 500+ companies run their B2C conversations on it.

- Shipped the real-time inbox that processes 100k+ customer messages a day, as one of 4 engineers across the React + TypeScript frontend (Vite, TanStack Router, Socket.IO) and FastAPI backend on Kubernetes.
- Load-tested the chat service to 100k concurrent connections, surfacing bottlenecks before customer traffic scaled into them.

Accomy

Feb 2024 – Oct 2024

Senior Software Engineer

Remote (Singapore)

- Led 2 frontend engineers to ship the MVP of a corporate hotel booking platform in 4 months, from empty repo to launch.
- Established the Next.js + TypeScript codebase from scratch - file structure, component patterns, review conventions - mentored 2 engineers onto it, and drove architecture decisions with product and design.

Coinalpha (Hummingbot)

Jun 2021 – Nov 2023

Software Engineer

Remote (US)

- Built the React + FastAPI liquidity mining platform for Hummingbot, the open-source market-making framework, used by ~1,000 bot operators facilitating ~\$100k in daily trading volume.
- Fixed memory leaks that exhausted 8 GB machines within hours - cut steady-state memory ~90% and eliminated browser freezes in long-running trading sessions.
- Halved CI build times by restructuring the build pipeline.
- Integrated MetaMask and Tezos wallets so operators could sign on-chain transactions directly from the UI.

Areca System

Jul 2020 – May 2021

Contract Software Engineer

Penang, Malaysia

- Built an Electron point-of-sale system from scratch for a 30-store nationwide supermarket chain - cashier UI, transaction flows, e-wallet payments.
- Designed the over-the-air update pipeline that let every in-store terminal update automatically, replacing manual on-site visits.

Aglive

Nov 2017 – Jun 2020

Software Engineer

Remote (Australia)

- Built and operated the tracking dashboard covering 500+ trucks and buses on the Austracker platform.
- Led deduplication of multi-million-row GPS data, removing ~25% duplicate records that fed customer reports.

EDUCATION

B.IT Communications & Networking (Hons), Universiti Tunku Abdul Rahman

May 2017
